## 1 Introductory section

This is a sample document. The general solution of the Helmholtz equation in cylindrical coordinates  $(r, \theta, z)$  is [1, Eq. (A–14)]

$$\tilde{p}(r, \theta, z) = p_0 [C_1 J_\ell(k_r r) + C_2 N_\ell(k_r r)] e^{i(\ell\theta + k_z z)}, \quad (1)$$

$$k = \sqrt{k_r^2 + k_z^2}, \quad (2)$$

where  $p = \text{Im}(\tilde{p}e^{-i\omega t})$  is the solution of the wave equation for angular frequency  $\omega$ ,  $p_0$  is the pressure amplitude,  $C_1$  and  $C_2$  are dimensionless constants, and  $J_\ell$  and  $N_\ell$  are the  $\ell$ th order Bessel and Neumann functions, respectively. The Pythagorean theorem is

$a^2 + b^2 = c^2.$

(3)

Equation (3) is one of the most famous equations of mathematics. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis.
